DETAILED ACTION

This action is responsive to application filed on August 16, 2001 in which claims 1-12 are presented for examination.

Claim Objections

Claims 1-12 are objected to because of the following informalities: the term "irrespective" should be replaced with clear terminology. Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The segment, "meta normal form" was not described in the specification in such a way as to enable one skilled in the art to make or use the invention.

Claim Rejections - 35 USC § 112

The following is a quotation of the **second** paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Application/Control Number: 09/931,302

Art Unit: 2171

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1, 5 and 9, the phrases "meta data" along with "higher order control" are indefinite. In the specification, metadata not "meta data" is described as describing information related to higher order control. It is not clear whether formatting and display for the characters is the bounds and meets of metadata. Second, the phrase "similar or different" is indefinite. Similar is interpreted as different. Third, the segment, "meta normal form" is indefinite. It is not clear what the "normal form" is (standard).

Regarding claims 2, 6 and 10, the segment, "Normal Form Meta Decomposed form" is indefinite. It is not clear how the decomposing is performed.

Regarding claims 3, 7 and 11, the segment, "Normal Form Meta Composed form" is indefinite. It is not clear how the composing is performed.

Regarding claims 2-4, 6-8 and 10-12 depend from 1, 5 and 9 respectively, thus contain the deficiencies of those claims and any other deficiencies stated above.

Conclusion

To expedite the process of examination Examiner requests that all future correspondences in regard to overcoming prior art rejections or other issues (e.g. 35 U.S.C. 112, objections and the like) set forth by the Examiner that Applicants provide and link to the most specific page and line numbers of the disclosure where the best support is found (see 35 U.S.C. 132).

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents and documents are cited to show the related state of art:
